EXPLANATIONS OF ABBREVIATIONS USED IN BIOSYSTEMATIC INDEX

A mnemonic-type abbreviated term appears in the third column of the Biosystematic Index adjacent to each taxonomic entry. The abbreviation represents the subject heading under which the abstract is assigned in BIOLOGICAL ABSTRACTS, and therefore indicates the type of study with which a particular taxonomic entry is concerned. Space-character requirements of the machine retrieval system used to compose and print the index make these abbreviations necessary. A complete listing of the abbreviated section headings is included for reference throughout the year. This will be revised and expanded when necessary, and republished with each new volume.

BIOSYSTEMATIC INDEX

The Biosystematic Index is composed of lists of taxonomic categories which are coordinated with the abstract and title numbers published in each issue of Abstracts of Mycology. Each organism mentioned in an abstract or title published in Abtracts of Mycology is indexed to these specific taxonomic categories. The notation printed adjacent to the abstract or title number represents the heading to which the abstract or title has been assigned; thus, providing the user with additional information. (See "Explanations of Abbreviations Used in Biosystematic Index" which precedes this index). These abbreviations were derived to conform to the space-character requirements of the machine used to compose and print this index: i.e., NERV PATH (Nervous System, Pathology); FLOR DISTRIB (Floristics and Distribution); CV PATH BV (Cardiovascular System, Pathology, Blood Vessels. An asterisk (*) to the right of the abstract or title number denotes one or more new taxa in the abstract.

INSTRUCTIONS FOR USE:

Since the primary aim of the Biosystematic Index is to provide both a taxonomic entry for all the organisms mentioned in every abstract or title published in Abstracts of Mycology and the primary field of interest of each abstract or title, it may be used by itself or in conjunction with one, or all of the other indexes.

Example:

If the reader is interested in studies on Myxophyta, the simplest method is to search Biosystematic Index for entries under Fungi-Myxophyta. The user should note the reference number and refer back to the actual abstracts or title.

[*reference numbers*]

Alternately, if the researcher is interested in a Myxophyta used within a specific field of study, i.e., morphology, the best approach is to scan the "Abbreviations Used in Biosystematic Index", which precedes the Biosystematic Index in each issue of Abstracts of Mycology, checking for the abbreviations of subject headings and subheadings which most clearly approach the user's specific area of research. Using the example presented above, the morphology of Myxophyta, the following subject headings and subheadings are selected as suitable:

Cytology, Cytochemistry-Plant = CYTOL PLANT
Morphology and Anatomy of Plants (includes Embryology) = PL MORPH

A check of the Myxophyta entries in the Biosystematic Index reveals six abstracts or titles, (49-059760, 49-059761, 68-044357, 68-046005, 49-063989, 49-063997) whose primary field of study is one of the selected abbreviated headings and subheadings listed above. Thus, by using one index, the taxonomically-oriented user can effectively search the material published in Abstracts of Mycology.

Combining Biosystematic Index with CROSS Index

A more intensive search of the literature published in Abstracts of Mycology can be accomplished by combining the taxonomic groupings in the Biosystematic Index with the subject headings of CROSS. For further information and a suggested procedure see the "Instructions For Use of CROSS Index" which precedes the CROSS Index.

Combining Biosystematic, CROSS and Subject Indexes

Often, deep searches in relatively obscure fields of study require a highly sophisticated retrieval system. By combining the Biosystematic (for taxonomy), the CROSS (for subject headings) and the Subject Indexes (for specific keywords), the researcher can retrieve all abstracts pertinent to any field of study published in Abstracts of Mycology. For further information and a suggested procedure, see the "Combination of Indexes with the Subject Index" under the "Instructions for Use of CROSS Index."

THE CROSS INDEX

ARRANGEMENT: The CROSS Index contains numbers of all the abstracts and titles appearing in Abstracts of Mycology (see Coding System, p. ii). These references are numerically arranged under major subject headings or subheadings. Therefore, if a given abstract or title number relates to several subjects, it will appear under as many headings or subheadings as necessary to properly index that abstract or title.

For convenience in searches, the major subject headings and their respective subheadings are alphabetized with the reference numbers arranged in six vertical columns beneath these headings.

Example: Sample heading as it appears in CROSS Index:

[*alphabetized major*
subject heading—subheading]

[*reference number*]

INSTRUCTIONS FOR USE: Since the primary aim of CROSS is to coordinate (cross relate) all abstracts and titles in Abstracts of Mycology which are specifically or generally pertinent to a particular subject, CROSS may be used to select abstracts and titles which are related to any number of subject headings. References located under a given CROSS heading may be compared with those under one or more other headings. The selection of identical numbers appearing under more than one subject heading would result in the retrieval of abstracts and titles containing references relative to the several headings.

Example:

If the reader desires all references concerned with a cytogenetic study of RNA metabolism in fungi, the search method would be as follows:

1. Scan the "Alphabetical Listing of Subject Headings that appear in the CROSS Index" which precedes the actual index.
2. Determine the specific subject headings which would most completely cover the study being searched (i.e., those factors which are absolutely necessary to obtain the information desired). In this example, the subject headings which are most pertinent are:

   Genetics and Cytogenetics—Plant
   Metabolism—Nucleic Acids, Purines, Pyrimidines
   Plant Physiology—Metabolism

3. Starting with the subject heading that contains the *least* number of entries, match the reference numbers listed under this subject heading (in the example given. This subject heading would be Metabolism—Nucleic Acids, Purines, Pyrimidines) against one of the other specific headings that have been selected (in the example given. These subject headings would be either Genetics and Cytogenetics—Plant or Plant Physiology—Metabolism). Those reference numbers which match can be compared

**INSTRUCTIONS FOR USE—
Continued:**

with the remaining subject heading for the final selection of reference numbers which pertain to all three subjects.

[*arrows indicate those reference numbers which appear under all of the preselected subject headings*]

COMBINING CROSS INDEX WITH BIOSYSTEMATIC INDEX

A more intensive search of the material published in Abstracts of Mycology can be undertaken by using the taxonomic groupings in the Biosystematic Index, which directly precede the CROSS Index in each issue of Abstracts of Mycology. For example, if the reader desired to narrow the search to a cytogenetic study of RNA metabolism in fungi (as outlined previously) to a specific taxonomic group, e.g., Basidiomycetes, this search could be accomplished quickly and easily by turning to the Biosystematic Index and checking the abstract and title numbers listed under FUNGI-BASIDIOMYCETES against those reference numbers previously obtained from searching the CROSS Index. The reference numbers that appear under both FUNGI-BASIDIOMYCETES in the Biosystematic Index and under the pertinent

COMBINING CROSS INDEX WITH BIOSYTEMATIC INDEX— Continued

subject headings under CROSS will contain the precise factors sought, i.e., a cytogenetic study of RNA metabolism in Basidiomycetes.

Suggested Procedure:

1. List the reference numbers retrieved from the CROSS Index and compare them with the abstract and title numbers listed under FUNGI-BASIDIOMYCETES in the Biosystematic Index.

2. Check the reference numbers which appear under both the pertinent subject headings in the CROSS Index and under FUNGI-BASIDIOMYCETES in the Biosystematic Index.

3. Disregard those reference numbers which do not appear in both the CROSS and Biosystematic Index.

The reference numbers retrieved from the CROSS Index were:

49-064333
49-064381
49-065175
48-044821
68-046005.

Because the reference numbers 49-065175 and 68-044821 are not indexed in the Biosystematic Index with the taxonomic group Fungi-Basidiomycetes, they should be disregarded.

4. The reference numbers which remain (i.e., 68-046005, 49-064333 and 49-064381) are certain to contain the information the user desires.

COMBINATION OF INDEXES WITH THE SUBJECT INDEX

Still greater usefulness of Abstracts of Mycology can be achieved by using the CROSS Index in combination with the Biosystematic and Subject Indexes. A combination of selected key-terms from the Subject Index with specific subject headings in CROSS may be used to locate information on various interrelated subjects.

Suggested procedure:

1. List all the potential, significant keywords to be searched in the Subject Index and the appropriate subject headings to be searched in CROSS Index.
2. Search the Subject Index for these preselected key-terms and scan the adjacent, modifying terms for further meaning and content. If interest is confirmed, note the reference number to the right.
3. Check each of the preselected subject headings under the CROSS Index.
4. By referring only to those reference numbers which appear under all of the preselected subject headings in CROSS and which follow significant keywords in the Subject Index, the researcher will obtain information specifically concerned with his field of study.

If the study emphasizes specific organisms, the researcher may then turn to the taxonomic groupings in the Biosystematic Index which will lead to reference numbers pertaining to organisms which may be of interest in specific applications. These fields of interest can be selected by comparing the reference numbers under the Biosystematic Index with those appearing under appropriate section or subsection headings in CROSS, and with those listed following selected, alphabetically indexed keywords in the Subject Index. By using only those reference numbers which appear in all three indexes, the search is progressively narrowed to specific papers pertinent to the defined interest of the searcher.
